AI, WITH RECEIPTS

Systems I designed, built, and run in production. My rule everywhere: **AI proposes, I approve — nothing merges without me.**

Replaced bug-hunting with an AI agent RUNNING DAILY

It watches our Slack bug channel; acknowledges a report in ~1 second, digs through the codebase, writes the root-cause analysis, drafts the fix on a branch, and files everything on a **GitHub Projects tracker**. Hunt → analyse → fix → keep books; merging stays human.

Genie — a voice concierge inside the product IN PRODUCT

Speak to the app in Hindi or English; it books rides, orders food, finds help. I built the full voice loop (ASR → LLM → neural TTS) on AWS, provider-swappable, guarded by a **typed capability registry** — money-moving actions always return to the human.

A storefront that redecorates itself — zero app releases LIVE

Festivals are a **content change, not a release**: theme, banners, prices, and animations stream from a server manifest + remote layouts. Swapped 4 festival takeovers live in one evening; guaranteed fallback to stock UI — it cannot crash by design.

I run AI agents like a team — with code reviews FLEET

Features decompose into tasks; fresh implementer agents build, reviewer agents critique every diff, disagreements escalate to me with evidence. One storefront feature: **11 commits, 53 new tests, reviewed & merged in a day** — a team's output from a team of one.

The boring parts run themselves AUTOMATED

Appium test-drives walk the apps like a user; releases flow GitHub Actions → registry → cloud by digest; push campaigns compose, send, and verify programmatically; always-on watchers wake my agents at 3 AM so I don't have to.

SKILLS

SIGNATURE	AI agent orchestration · LLM apps (Claude, Bedrock) · Voice AI pipelines (ASR·LLM·TTS) · Server-driven UI · Prompt & tool design · C#/.NET · Unity 3D & Digital Twin
FLUENT	Flutter · Azure (AZ-900, AZ-104) · AWS (EC2, RDS, Polly, Transcribe) · NestJS/Node · CI/CD (GitHub Actions, Azure DevOps) · AR/VR/MR · SQL & Prisma
HUMAN	Engineering leadership · Product ownership · Mentoring (ex-professor) · Architecture reviews · Budget & vendor management

EXPERIENCE — CURRENT

Workstream Lead, Software Engineering — National Oilwell Varco (NOV)

JUL 2023 — PRESENT

- Lead the Corporate Application Services engineering workstream: the company's in-house enterprise & mobile apps, end to end.
- Own and govern **70+ application repositories** — code standards, branching strategy, release hygiene across teams.
- Architected an in-house **Secret Manager** (store, rotate, serve credentials) and a suite of automated operational jobs.

Founder & Lead Developer — HatoHelp.in & MotoSure.in · with Metavisionrs IT Solution

FEB 2025 — PRESENT

- Two consumer platforms, solo-architected from concept to app stores, pro-bono. This is where the AI fleet above lives — in production, for real users.
- HatoHelp** — "Help All, Trust One": rides, food, grocery, parcels & community help with Genie inside. **MotoSure** — 24/7 roadside assistance across India.
- Full stack with agents: Flutter apps, NestJS backend, AWS infra, CI/CD, observability, releases.

Technical Lead — Wipro Technologies

OCT 2021 — JUN 2023

- Digital Twin platform creation with Unity 3D + Azure for an Energy & Utilities client; designed Azure architectures and DTDL solutions with client architects.
- Built the CI/CD story for Unity + web on Azure DevOps Pipelines incl. automated test plans; hands-on with 10+ Azure services; drove P&ID → Digital Twin transformation.

Technical Lead (Consultant) • SDE II — Outreal XR, Dubai • Jio Tesseract (Reliance)

MAY — OCT 2021

- Outreal XR: secure AWS Workspace infrastructure, Unity performance leadership, budget & vendor management.
- Jio Tesseract: Unity 3D backend pipelines and SDK developer-relations for in-house MR glasses.

Senior Faculty, Gaming — iNurture • deputed professor, D.Y. Patil University, Pune

2019 — 2021

- Taught and mentored undergraduates in game development — projects, placements, and the craft. Teaching engineers made me a better one.

Senior Software Engineer — Wipro Technologies

AUG 2014 — 2019

- **Saudi Aramco deputation:** digital elevation maps with GDAL; 30 m/pixel height-map terrain of Saudi Arabia; Unity HLSL shaders.
- **Oil & Gas major (4 yrs):** Azure Cognitive Search with custom ML skillsets; IBM Watson voice control; 3D live visualization for oil exploration; vessel inspection & voyage tracking for BP.
- **AR/VR (2 yrs):** automobile marketing app; training-simulator POCs for an aircraft manufacturer; EPSON Moverio BT-300 plugin work.

PRODUCTS

HatoHelp

hatohelp.in

"Help All, Trust One." Rides, food, grocery, parcels & community help in one trust-based app — with the Genie voice concierge and a self-updating festival storefront.

MotoSure

motosure.in

24/7 roadside assistance for India — on-demand car & bike breakdown support connecting stranded motorists with quick help anywhere.

MeetnDance

meetndance.com

A low-poly online rave: 3D multiplayer dance floor with avatars, emotes, music, and voice chat. A tiny indie metaverse built with love.

HatoEat — Cafe Hato

hatoeat.in • menu.hatoeat.in

"Healthy And Tasty Orders." Cafe brand — I designed and built the full web presence, digital menu included.

EDUCATION • AWARDS • CERTIFICATIONS

M.Tech, Software Engineering — BITS Pilani 2015 — 2018

- Work-Integrated Learning Program, sponsored by Wipro — engineering by day, engineering theory by night.

Certifications

- Microsoft Azure: **AZ-900, AZ-104** — plus a folder full of the rest (linked on the website).

Awards

- **1st place** — AR Game Development Hackathon, India (2018)
- League Exemplar — Wipro Industrial Engineering Services (2018)
- League Extraordinary — Wipro Platform & Engineering Services (2017)

THE SHORT VERSION

Eleven years from Unity shaders to digital twins to cloud — and now I multiply that experience with AI agents that hunt bugs, talk to users, and ship features while I sleep. I bring the judgment; the fleet brings the hours. **Together we out-ship the stampede.**
