

GOOD AFTERNOON.

I'm Anurag. I ship with an AI fleet.

Workstream Lead at **NOV** by day, founder of **HatoHelp** & **MotoSure** always. Eleven years across Unity, digital twins, and cloud taught me how software gets built. The last two taught me something better: how to make **AI agents build it with me** — hunting bugs, talking to users, and shipping features while I sleep.

THE AI OPERATIONS LEDGER

Everyone's resume says "*AI-enthusiast*" now. Mine has receipts. These are systems I designed, built, and run in production — each one replaced a human grind with an agent I trust, and each one has a paper trail. **My rule everywhere: AI proposes, I approve. Nothing merges without me.**

I replaced bug-hunting with an AI agent that never sleeps

RUNNING DAILY

SLACK BUG CHANNEL → TRIAGE → ANALYSIS → FIX → TRACKER

Our team used to lose evenings to bug triage. So I built an agent that watches our Slack bug channel. When someone posts a bug, it reacts in about a second, reads the report, digs through the codebase, works out the root cause, and drafts the fix on a branch — then files the whole investigation on a GitHub Projects tracker so nothing gets lost and everything is auditable.

- It **hunts** — screenshots, stack traces, reporter chats: it pieces the story together itself.
- It **analyses** — root cause written up like a good engineer's post-mortem, not a guess.
- It **fixes** — branch, patch, and tests, but merging stays a human decision: mine.
- It **keeps books** — every bug lands on the GitHub tracker with status, owner, and evidence.

► proof: bug reports acknowledged in ~1 second; tracker maintained on GitHub Projects

Genie — an AI concierge that talks to people

IN PRODUCT

VOICE IN → INTENT → ACTION → VOICE OUT

Inside HatoHelp I built **Genie**: you speak to the app — in Hindi or English — and it books your ride, orders your food, finds you help. I engineered the full voice loop (speech recognition → LLM brain → neural speech out) on AWS, and made it provider-swappable so the brain or the voice can be replaced without touching the product. The hard part wasn't the AI — it was the safety: I designed a capability registry so Genie can only do what it's explicitly allowed to do, and money-moving actions always come back to the human.

► proof: live voice concierge; typed capability registry; zero unauthorized actions

A storefront that redecorates itself — no app updates

ZERO RELEASES

SERVER-DRIVEN UI • REMOTE LAYOUTS • LIVE IN MINUTES

I designed our grocery storefront so festivals are a **content change, not a release**. Theme, hero, banners, prices, even animations stream from a JSON manifest and remote layout templates; marketing edits one file and every user's app transforms on the next open — Diwali to Christmas in minutes. If anything server-side is ever broken, the app falls back to its stock look. It cannot crash by design.

► proof: 4 festival takeovers swapped live in one evening, zero binaries shipped

I run AI agents like a team — with reviews

FLEET

MULTI-AGENT DEVELOPMENT • ADVERSARIAL REVIEW • LEDGERS

I don't "prompt" — I **orchestrate**. Features get decomposed into tasks, each task goes to a fresh implementer agent, every diff passes a reviewer agent, and disagreements escalate to me with evidence. The process caught real production bugs the tests missed. It's code review culture, applied to machines — and it means I ship a team's worth of output with a team of one.

► proof: a full storefront feature: 11 commits, 53 new tests, reviewed & merged in one day

The boring parts run themselves

AUTOMATED

DEVICE AUTOMATION • CI/CD • CAMPAIGNS • WATCHERS

- **Real-device test drives:** Appium scripts walk our apps like a user — book the ride, order the food, screenshot every step.
- **Release trains:** GitHub Actions → container registry → cloud deploy, by digest, no hands.
- **Push campaigns:** engagement notifications composed, sent, and verified end-to-end programmatically.
- **Always-on watchers:** schedulers that wake my agents when something needs eyes at 3 AM.

► proof: smoke suites, deploys, and campaigns run without me in the loop

Platforms designed for the AI era

PLATFORM

ARCHITECTURE • GUARDRAILS • OBSERVABILITY

The two consumer platforms I founded are built so AI can safely operate them: typed capability registries instead of open endpoints, server-authoritative pricing, idempotent dispatch, audit trails on every automated action, and observability dashboards so I can watch my agents work. AI moves fast; the platform is what keeps it honest.

► proof: ops dashboard live; every agent action attributable and reversible

WHAT I'M DANGEROUS WITH

SIGNATURE

The work I'd bet my name on.

AI Agent Orchestration

LLM Apps (Claude • Bedrock)

Voice AI Pipelines (ASR•LLM•TTS)

Server-Driven UI

Prompt & Tool Design

C# / .NET

Unity 3D & Digital Twin

FLUENT

Daily drivers, production-grade.

Flutter

Azure (AZ-900 • AZ-104)

AWS (EC2•RDS•Polly•Transcribe)

NestJS / Node

CI/CD (GitHub Actions • Azure DevOps)

AR / VR / MR

SQL & Prisma

HUMAN SKILLS

The parts AI can't do for me.

WHERE I'VE WORKED

JUL 2023 — PRESENT

Workstream Lead, Software Engineering National Oilwell Varco (NOV)

I lead the engineering workstream for Corporate Application Services — the company's in-house enterprise and mobile applications, end to end.

- Own and govern a portfolio of **70+ application repositories**: code standards, branching strategy, release hygiene across multiple teams.
- Architected an in-house **Secret Manager** that stores, rotates, and serves credentials across services.
- Built a suite of automated jobs for scheduled syncs and operational workflows — less manual effort, more reliability.
- Technical leadership, mentorship, and delivery ownership across the workstream.

FEB 2025 — PRESENT

Founder & Lead Developer HatoHelp.in & MotoSure.in · with Metavisionrs IT Solution Pvt. Ltd.

My passion project, built pro-bono in my own time: two consumer platforms, solo-architected from concept to app stores. This is where my AI fleet lives — everything in the ledger above runs here, in production, for real users.

- **HatoHelp** — *"Help All, Trust One"* — rides, food, grocery, parcels and community help in one trust-based app, with the Genie voice concierge inside.
- **MotoSure** — 24/7 roadside assistance across India: on-demand car & bike breakdown support.
- Full stack, one pair of hands + agents: Flutter apps, NestJS backend, AWS infra, CI/CD, observability, releases.

OCT 2021 — JUN 2023

Technical Lead Wipro Technologies

Digital Twin platform creation with Unity 3D and Azure, plus team leadership for an Energy & Utilities client.

- Designed Azure architectures and DTDL solutions with client architects and stakeholders.
- Built the CI/CD story for Unity + web on Azure DevOps Pipelines, including automated test plans.
- Hands-on with 10+ Azure services; drove the P&ID → Digital Twin transformation work.

MAY 2021 — OCT 2021

Technical Lead (Consultant) · SDE II Outreal XR, Dubai · Jio Tesseract (Reliance)

- At Outreal XR: secure AWS Workspace infrastructure, Unity performance leadership, budget & vendor management.
- At Jio Tesseract: Unity 3D backend pipelines and SDK developer-relations for in-house MR glasses.

2019 — 2021

Senior Faculty, Gaming iNurture Education · deputed professor at D.Y. Patil University, Pune

Taught and mentored undergraduates in game development — projects, placements, and the craft. Teaching engineers made me a better one.

AUG 2014 — 2019

Senior Software Engineer

Wipro Technologies

- **Saudi Aramco deputation:** digital elevation maps with GDAL; height-map terrain of Saudi Arabia at 30 m/pixel; Unity HLSL shaders.
- **Oil & Gas major (4 yrs):** Azure Cognitive Search with custom ML skillsets; IBM Watson voice control; 3D live visualization for oil exploration; vessel inspection & voyage tracking for BP.
- **AR/VR (2 yrs):** automobile marketing app; training-simulator POCs for an aircraft manufacturer; EPSON Moverio BT-300 plugin work.

THINGS I'VE BUILT FOR PEOPLE

FOUNDER • PLATFORM

HatoHelp

hatohelp.in

"Help All, Trust One." Rides, food, grocery, parcels and community help in one trust-based app — with Genie, the voice concierge, and a self-updating festival storefront.

FOUNDER • PLATFORM

MotoSure

motosure.in

24/7 roadside assistance for India — on-demand car & bike breakdown support connecting stranded motorists with quick help anywhere.

FUN • METAVERSE

MeetnDance

meetndance.com

A low-poly online rave — a 3D multiplayer dance floor with avatars, emotes, music, and voice chat. A tiny indie metaverse built with love.

DESIGN • WEB

HatoEat — Cafe Hato

hatoeat.in • menu.hatoeat.in

"Healthy And Tasty Orders." A cafe brand where I designed and built the whole web presence, digital menu included.

CREDENTIALS & WINS

EDUCATION

M.Tech, Software Engineering

BITS Pilani • 2015-2018 • Work-Integrated Learning Program, sponsored by Wipro — engineering by day, engineering theory by night.

AWARDS

Three that mattered

- **1st place** — AR Game Dev Hackathon, India (2018)
- League Exemplar — Wipro IES (2018)
- League Extraordinary — Wipro P&ES (2017)
